SUMMARY

Senior Software Engineer (5+ Years) driving high-impact systems for major platforms like ESPN BET, Barstool Sportsbook and Lightspeed Commerce. Owned end-to-end development of scalable payment and iGaming features, from integrating providers across multiple jurisdictions to launching critical real-time processing capabilities. Have some experience building small engineering teams. Core expertise: Elixir/Phoenix, Go, Python and React.

EXPERIENCE

Senior Software Engineer

PENN Entertainment

Dec/2022 - Present

Toronto, ON

- Led the Payments team during the 17-state launch of **ESPN BET**. Which became the **#1 app** in the US App Store within 24 hours of release.
- Drove the development and integration of new payment processors like Braintree, Paysafe, and Venmo. Resulting in monthly processing volumes of **\$16M** in deposits and **\$10M** in withdrawals.
- Built the Dropzone feature for our casino platform, which generated **\$1.3M** in handle and **\$772K** in GGR within the first 2 weeks, with **25%** user adoption in Ontario.
- Delivered several strategic initiatives expanding on our **Elixir** and **Phoenix** Casino platform for **Barstool Sportsbook**, contributing to approximately **\$240K** in daily Gross Gaming Revenue (GGR).

Lead Software Engineer

Hypotenuse Labs

Apr/2022 - Dec/2022

Toronto, ON

- Led development on multiple end-to-end client projects, including a luxury product marketplace with **1M+** items and **Ashton Kutcher** as an investor.
- Built federated GraphQL gateway and implemented multi-level caching (**Redis** + CDN) to handle high-traffic product catalogs, reducing API response times by over **60%**.
- Owned technical planning and architecture decisions while working directly with clients to scope projects, set roadmaps, and manage delivery timelines.
- Conducted technical interviews and managed engineers as the team scaled.

Software Engineer II

Lightspeed Commerce

Aug/2020 - Apr/2022

Toronto, ON

- Built Google Ads integration enabling merchants to advertise directly within Lightspeed platform as part of **global partnership with Google**, featured in the Financial Post.
- Implemented OAuth2-based authentication to **Golang microservice** including scope authorization to enhance security and user access control.
- Decreased merchant dropoff rate **27%** by optimizing billing flow with Redis.

Software Developer (Co-op)

Various Companies

Sept/2017 - Apr/2020

Redwood City, CA & Toronto, ON

- **Athos**: Designed and built real-time data streaming and processing architecture with **InfluxDB**, PySpark and AWS Kinesis.
- **Bonsai**: Created Python implementation of SNN classification model based on published research.
- **WalterFedy**: Developed the company's internal portal from scratch using Django, used by **400+** employees.
- **Openlane**: Delivered production features with **AWS SQS**, Grails and Angular.

TECHNICAL SKILLS

Languages: Elixir, Python, Go, JavaScript, Java, SQL, GraphQL, R

Frameworks: Phoenix, React, Next.js, Django, Tailwind, Gatsby, Ecto

Databases & Caching: PostgreSQL, Redis, InfluxDB, BigQuery

Infrastructure: Kubernetes, Docker, Terraform, AWS (S3, EC2, Lambda, SQS, Kinesis), GCP

Tools: Git, Datadog, Kafka, CircleCI, ArgoCD, GitHub Actions

EDUCATION

University of Waterloo

Bachelor of Mathematics in Statistics(Co-op)

Aug/2015 - Aug/2020
